Remote Availability

Remote-first in distributed English-speaking teams in every role to date | Available 30 days' notice

Based in IST · Overlaps European hours through the afternoon and Asia-Pacific in full · Open to employer-of-record employment or a direct contractor arrangement

SUMMARY

Frontend Engineer with 3+ years building production web interfaces in React, Next.js and Astro, working remote-first in distributed, English-speaking teams throughout. Currently ship the frontend across a multi-brand startup studio on a shared component library, design tokens and a CI/CD pipeline. Strong on translating Figma into accessible, responsive, maintainable UI, integrating REST APIs, and carrying interactive work (3D, animation, real-time dashboards) from prototype to production. Comfortable owning frontend delivery end to end, with asynchronous handoffs and written communication.

EXPERIENCE

Frontend Developer

BeyondZ / Venture Way, Remote | Jul 2025 - Present

- Architecting the frontend of Fred, an AI assistant client, as a pnpm monorepo with a platform-agnostic shared package (API client, auth, hooks, zod schemas) so a future React Native app reuses the business logic unchanged. React 18, TypeScript, Vite, TanStack Query v5, Tailwind v4, react-hook-form with zod.
- Built SSE token-streaming chat with optimistic updates, AbortController cancellation and cursor-paged history, over a shared axios client handling token refresh with request locking, retry with backoff and deduplication. Access tokens held in memory with HTTP-only refresh cookies.
- Delivered 8+ production marketing and corporate sites for a multi-brand startup studio, including VentureFactory.AI, BeyondZ and the World Startup Federation, on a shared component library, design-token system and GitHub Actions pipeline.
- Built the frontend of an in-house headless CMS platform: a React/MUI admin console for content management and submissions review, plus typed API clients with retry/backoff that consume the CMS REST API from production client sites.
- Built the frontend of a Next.js corporate site, including a password-gated admin dashboard for blog and case-study content with rich-text editing and image upload, integrated against a Supabase backend.
- Implemented advanced interactive features, including a Three.js / react-three-fiber 3D globe hero and animated neural-network graphics, with Playwright coverage and Azure Static Web Apps CI/CD.

Freelance Frontend Developer

Self-employed, Remote | Oct 2024 - Jul 2025

- Built a full-stack management application replacing manual tracking; client reported an estimated 15-25% productivity gain.
- Designed and built a real-time IoT dashboard UI in React, focused on usability and live interactivity.
- Delivered complete product UI/UX from scratch against accessibility and design-system guidelines, and shipped a responsive startup marketing site in Wix Studio with custom CSS.

Full Stack Developer Intern

Cuvette Tech, Remote | Jan 2024 - Jul 2024

- Built Quizzie, a MERN-stack quiz builder with a responsive interface implemented from Figma designs.
- Built Task Manager, a full application with JWT authentication, CRUD operations and secured REST API endpoints.

Independent Study, Full Stack Development

Self-directed, India | Jan 2023 - Dec 2023

- Retrained from frontend into full-stack development, working through the MERN stack end to end and building browser games and small full-stack applications with authentication and CRUD APIs.

Associate Developer L1

Publicis Sapient, Bangalore, India | Feb 2022 - Dec 2022

- Developed frontend features for a high-traffic eCommerce platform on Salesforce Commerce Cloud (SFCC), in a global delivery team working to European and US client standards.
- Led frontend development for a hotel-management system covering booking, room availability and authentication, in Agile teams, running code reviews against web-performance standards.

PROJECTS

WebNiyam - Multi-tenant platform for managing several websites from one dashboard. Built the component-driven content management interface, media and forms handling, role-based permissions and versioned publishing UI. Frontend near complete; backend in development. *React, TypeScript, REST APIs, PostgreSQL.*

Douthya - Multi-workspace collaborative task-management platform supporting task assignment, custom roles and permission-based access control, with workspace-scoped workflows and centralised authorization. *React, Node.js, Express, MongoDB, REST APIs.*

Portfolio (josephk.dev) - Zero-framework-JS Astro build with a canvas particle-portrait hero, a working in-page shell, and full reduced-motion and keyboard-accessibility support. *React-free. Astro, TypeScript, Canvas.*

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript (ES6+), Java, Python, SQL, HTML5, CSS3

Frontend: React.js, Next.js, Astro, Vite, TanStack Query, React Router, react-hook-form, Zod, React Three Fiber, React Flow, Responsive Design, Web Accessibility (WCAG 2.2 AA)

Styling: Tailwind CSS, Sass, CSS Modules, shadcn/ui, Radix UI, Material UI, Design Systems, Design Tokens

Backend: Node.js, Express.js, RESTful APIs, MongoDB, PostgreSQL, Supabase, JWT Authentication

Tooling: Git, GitHub Actions, CI/CD, pnpm monorepos, Azure Static Web Apps, Vercel, Playwright, Figma, Postman, Framer Motion, Agile / Scrum

Spoken Languages: English - fluent, sole working language across every role to date.

EDUCATION

B.Tech, Computer Science & Engineering | 2017 - 2021

Sahrdaya College of Engineering and Technology, APJ Abdul Kalam Technological University
